

Item P10-9788

Control Panel-Single Switch

The Control Panel contains the machine's on/off switch, along with an amp meter which lets the operator know exactly the correct speed/pressure to operate the core rig at. Proper use of the amp meter increases productivity and maximizes core bit life. It has a single on/off switch that controls both the vacuum pump and drill motor at the same time. The amp meter has three red lines; for use with 15 amp, 18 amp and 20 amp motors. Comes with 20 amp plug end.
