Item P13-0075

Exact Pipe Bevel 220E

With Exact's Pipe Bevel 220E you can easily make fast and accurate welding bevels to pipes in a variety of materials. The user interface of the machine is similar to Exact pipe saws, which makes it easy for the operator to adapt after cutting the pipe with any Exact pipe saw. The cutting head of the beveller has three cutting tips, each of them having four cutting edges to rotate once becoming blunt, so it is economical to use. The cutting heads are available in most commonly used bevel angles (30°, 37.5° and 45°). It is also possible to make different 'tailored' bevel angles if required. There is also a stopper feature that enables the operator to make similar additional bevels to the same pipe O/D.
