

Item P10-2704
Husqvarna 14" Electric Cut-Off Saw (Wet or Dry)

This versatile and powerful electric cut-off saw enables dust-free cutting. The K 4000 Wet is perfect for indoor cutting jobs with minimal dust and slurry. It has an integrated regulator that controls the water volume, ensuring a constant flow to the blade. The amount of water is sufficient to bind the dust without creating an excess of water. Unlike other electric cutters, the blade on the K3000 Wet rotates forward, cutting into the material efficiently and with minimal strain on the operator. K 4000 is easily adaptable for dry cutting with the vacuum attachment (**item 10-2783**) accessory for minimal dust generation. The K4000 Wet has Elgard™ which warns users of an approaching overload. Softstart feature gives the saw a gradual start when the trigger is pulled, keeping the saw from jumping to full power. This feature means more control and safety for the operator. Power cord inlet located underneath the handle enables ease of use and comfortable handling with hassle free operation. The new pop-up carbon brushes protects the collector from unforeseen rotor changes which increases reliability and enables longer service intervals. Quick acting locks for the spindle and a large outlet in the blade guard simplifies blade replacement. No special electrical requirements (120 volts, 15 amps).

Item	Description	Attributes
10-2704		Model: K4000 Blade Size: 14" Arbor Size: 1 " Depth of Cut: 5" Weight: 16.8
10-2783		Model: Vacuum Attachment for Dry Cutting
