Item P99-3878

Stress Plates

Base Material: Insulation, Single-Ply Roofing Materials

Size Range: 2" and 3" Round

Stress Plates are designed for use with Deck Screws and Spike anchors. Stress plates are used when attaching insulation and single ply materials to distribute load and prevent the material being fastened from pulling over the head of the fastener. In addition to the stress plates, a sealing washer and a plastic bearing washer are available for use with flashing and termination systems.
